

Migration 2000 is a versatile conversion tool that migrates your Oracle Forms 3.0 based applications Forms 4.5/5.0/6.0/6i. The migrated application is deployment ready.

Migration 2000 has been successfully used to migrate thousands of forms, belonging to several applications. It works in a batch mode and drastically cuts down the time of conversion. It facilitates adherence to standards by accepting the GUI settings for the entire batch and remembering them for subsequent batches. It documents as it converts. The input source code is not altered, only converted and added to. The whole conversion process is automated resulting in substantial time and cost saving.

Features :

Supports full mouse navigation:

Migration 2000 supports Oracle standard mouse navigation, provided in Oracle Forms environment.

GUI look and feel with added aesthetics:

Migration 2000 converts the 'character mode' look and feel of the Forms to 'GUI' look and feel, with the following facilities:

- Font / Color setting for Boiler Plate Text
- Font / Color setting for Edit Items
- Bevels settings for Lines
- Vertical Spacing between the Controls
- Flexible Co-ordinate system
- Number field alignment

The migrated application looks and feels like a GUI application unlike the output of some other migration tools.

Multi Page Forms:

Migration 2000 intelligently converts such forms to use stacked canvases and / or dialog boxes.

Supports deployment of application in Client Server Mode and Web Enabled Mode:

The converted application may be deployed on the latest version of Oracle Forms under Windows 95/98/NT desktop, in Client Server mode or the Web Enabled mode.

Variable Date Format:

With **Migration 2000** you can enter the date format of your choice. The converted application works with the specified date format.

Converts Forms 3.0 supported Oracle facilities to equivalent Oracle Forms supported facilities:

- Functions
- Packages
- Keywords
- Error Messages
- FYI Messages
- Windows Titles
- Non enterable fields
- Form referencing

Supports standardization of GUI:

Migration 2000 accepts GUI settings for an entire batch of INP files. This ensures that all the converted forms have a uniform standard look and feel.

Toolbars:

Migration 2000 provides a facility to add a MDI Toolbar and functionality very easily. You may customize the Toolbar for Icons, sequence of Iconic buttons and functionality.

Documentation:

Migration 2000 generates a Report which logs all the events that took place during the conversion batch.

100% Oracle Compatible Code:

The migrated code is 100% Developer 2000 compatible, and may be maintained and modified.

Migration 2000 does not change / delete any original source code. Oracle Forms 4.5 API has been used.

Speed of Conversion:

It takes on an average of one minute to a form

Ease of Use:

Migration 2000 is probably the simplest among all similar Oracle Forms 3.0 to Forms 4.5/5.0/6.0/6i conversion tools. It is a genuinely shrink-wrapped product. Open the box, install it using the manual and start Oracle Forms 3.0 conversion.

ORACLE RELATED MIGRATION SERVICES

DSS provides efficient, cost- effective migration services in the following areas:

Migration from Oracle Forms 3.0. to Forms 4.5/5.0/6.0/6i

With **DSS** migration services you may opt for migration of your application to Forms 4.5/5.0/6.0/6i and protect your existing Hardware investment by continuing to use character based terminals or convert to a Windows based GUI interface. Whilst migrating we ensure that the functionality is not changed. We use our tool '**Migration 2000**' to provide these services.

We have two options for our Migration Services viz

- Offshore at our location in Pune
- Onsite at your offices with our persons and our tool **Migration 2000**

Migration of Database and its procedures from SQL Server /Informix/Sybase to Oracle 8.x

You may want to support both SQL Server & Oracle database. At **DSS** we help you migrate from SQL Server to Oracle 8.x efficiently and swiftly, giving you the benefit of saving in cost and time without any loss of functionality. We also provide full documentation of the conversion.

Migration from Oracle Reports ver 1.1/RPT to Report writer Ver 6.0.

DSS can migrate not only your legacy systems developed using earlier version of Oracle Forms but also the reports written in RPT Ver 1.1 to Ver 6.0.
